

## **Analyser Instructions for suspect equipment :**

These instructions are to make the Analyser work .

To start, you need to drag the file you want to analyse in the folder 'Support' like this :

Next, go in the main directory and start the Analyser with your terminal

Make sure your file you want to analyze doesn't have an accent and/or space.

Start your programm like this :

```
PS C:\Users\mathi\Documents\SAé1.05> & C:/Users/mathi/AppData/Local/Microsoft/WindowsApps/python3.11.exe c:/Users/mathi/
Documents/SAé1.05/Analyser.py
```

Next, in the terminal, you have to input the path to your file like this :

```
Donnez le nom du fichier :
Support/log.txt
```

Press "Enter" and wait the programm return "Done"

```
Done.
PS C:\Users\mathi\Documents\SAé1.05>
```

Now, you juste have to open the file 'rapport' in the folder 'Rapport' to see all the information you need like all IP addresses, equipment which causes problèms ...
